

FSG 9601 RED CLOVER

- High yield
- Unmatched forage quality
- Excellent disease resistance
- Superior persistence
- Highly resistant to northern and southern anthracnose and powdery mildew

FSG 9601 is an elite new-generation red clover developed for high yields and the persistence to last three or more years under good management. FSG 9601 is at 50% bloom two days later than Arlington in the spring and performs extremely well over a wide geographic area and under variable growing conditions.

Whether it's for hay, pasture or silage, FSG 9601 is hard to beat when it comes to yield, persistence and disease resistance.
