

# PLUS RED CLOVER

- Resistant to northern and southern anthracnose and powdery mildew
- Great forage quality
- Superior yielding
- Plus Red Clover's persistence gives it the potential for three years or more of production

Plus Red Clover is a new-generation medium red clover that is highly disease resistant and is a superior-yielding variety. Plus is at 50% bloom approximately one day earlier than Arlington and five days later than Kenstar in the spring. It provides all the disease resistance growers have come to expect from improved varieties.

Plus Red clover is excellent when used alone for hay, pasture, and haylage, or when used in combination with cool season grasses or other legumes such as alfalfa or white clover.

PERFORMANCE DATA– FORAGE YIELD			
Variety	Locations	Data Years	Avg. % Mean
Plus	10	16	104
Kenstar	14	22	101
Acclaim	7	12	101
Marathon	16	24	95
Arlington	16	24	92
